Stine 9734-G brand corn is a widely adapted proven winner featuring glyphosate tolerance. Its solid agronomics, including a taller plant type with excellent root structure and stalks for standability, make this a great choice for every farming operation. 9734-G features very good grey leaf spot resistance and continues to be a workhorse in this maturity throughout the Corn Belt. It's broadly adaptive across yield environments and makes an excellent early-season option for the South and full-season choice for the North. It works as an early- or late-season line.
